- What you have done for the project during the week individually
 1. Create the diagrams for showing the relationships between the functional requirements and design steps.
 2. Modify the structure of requirements:
 - a) Prioritize requirements based on the feedbacks from the client
 - b) Delete the unnecessary requirements to narrow down the scope of the project to make sure we can finish this project in time
- What you plan to do for the project next week individually
 1. Discuss with the team about the modified design and requirements and do some adjustment
 2. Write the proposal system design part assigned to me based on the final version of the design and requirements
 3. Write detail description about every component within the design part
- List the issue you encounter and give reasons if applicable
 1. 1. It is difficult to narrow the scope of the requirements, because the project requires a comprehensive methods collection and analysis, and to deal with this data scale, so many aspects and requirements need to be considered. To sum up, prioritize these requirements may be a best option in this situation.
