1. Dataset Explanation – Fan Zhang
2. Method Performance Evaluation – Tianlei Qi

Paper understanding presentation (Software Vulnerability Discovery via Learning Multi-domain Knowledge Bases)-David

1. Understanding of the paper
2. Current replication progress report

4. Meeting Notes, Decisions, Issues

Client feedback:

1. We need provide more test cases, more scenarios to prove the performances of the methods. It is not enough to tell the conclusion
2. Due to the dataset number is limited, better put on paper results to give reader a bigger picture about the project
3. We need more reasons to prove the datasets are representative. Example:
FFmpeg is a real-world software.
It is developed by a big company and many engineers.
Many other big companies used the FFmpeg as core.

Supervisor feedback:

1. The presentation must have further plan.
2. Make sure the time arrangement is fit the schedule of this semester.
