- What you have done for the project during the week individually

1. I focused on preparatory work such as reading the provided papers to make sure I was on the right track.
2. I figured out a high-level design for our product and discussed it with my teammates during the meetings.
3. For the proposal, I have worked out a format structure based on my previous course: Research Method.
4. I have googled the tools that mentioned by the client to see how they work and what are their advantages and disadvantages, so my team can decide which tool will be used during the data preprocess stage.

- What you plan to do for the project next week individually

Since we have come up with those 11 functional requirements and 5 unfunctional requirements, I think I will firstly analyze them and prioritize them to convenient our future work. Then I will detail these functional and unfunctional requirements and utilize a diagram which contains a high-level design of the project along with the requirement description to show their relationships.

During the client meeting, I need to check with the client if he is satisfied with those requirements. And I will adjust them based on the client's feedback to make sure we are on the right direction of the project.

- List the issue you encounter and give reasons if applicable

1. The previous papers are quite difficult to understand, and it will cost a lot of time to get familiar with the algorithms mentioned in the papers.
2. Though we have come up with 16 requirements, I am not sure if this is what the client wants.
