

## Weekly Report — Friday, 28 May 2021

Student Name: Siqi Sun

Student ID: a1752383

### • What I have done

1. Continue narrowing down the scope of the project.
2. Complete a slide for demonstrating how we identify the scope.
3. Read relative papers and evaluated them based on our standards (e.g. include source code, highly reflect cross-project)
4. Update Meeting Summaries (Wiki Page).
5. Figure out how to use the online tool word2vec(<https://jalammar.github.io/illustrated-word2vec/>) and Code Sensor (<https://github.com/opendata-stuttgart/sensors-software>)

Reflection :

During this week's client meeting, we've got some feedbacks on the paper screening procedures such as key word choosing. Instead of applying the keyword 'cross-domain', we need change it to 'cross-project' for more searching results because 'cross-project' is relatively high used. Another feedback from our client is that we should not only use papers from the same authors team because it may causes bias.

### • What I plan to do

1. Find another website or platform such as [scopes.com](https://scopes.com) to search relative papers.
2. Start working on the slides for the final presentation.
3. Complete the Wiki page sidebars content.

### • The issues I've encountered

1. Code Sensor version issue. (Status: Fixed)
2. The CPU was fully occupied when I run the code.
