

## **Weekly Report** —*Friday, 30 April 2021*

Student Name: Siqu Sun

Student ID: a1752383

### **• What I have done**

1. Prepared literature review and project specification part in slides for client presentation.
2. Hands on the data collection process.
3. read the related paper 'A performance evaluation of deep-learned features for software vulnerabilities detection' and found the source code from it.
4. Contact with my teammates for next week plan.

### **• What I plan to do**

1. Dig into details of the source code and get some inspirations from it.
2. Replicate the existing model and imitate general workflows of related analysis.
3. Draw a gantt chart to demonstrate team current progress and reflected that in the Github repository.

### **• the issue I've encountered**

1. Insufficient literature review materials at this moment. Need to read more and compare them.
2. For the data collection part, I need to follow more specific rules and select the representative data.
