

Weekly Progress Report - 4

Section 1: Implementation/development progress

This week I completed the introduction section of the proposal and made modifications to the “Implementation of Data Pre-processing and Modeling stage”, in this section I applied my own domain knowledge from my ongoing research on “Optimizing Low-level Implementation of Cryptographic Primitives”, there I was able to express my understanding and contribute to the section. I was also in charge of proofreading the proposal and doing a final revision before the submission.

Section 2: Issues and Challenges

No significant issues were encountered during this iteration. The only part where I set to improve for the next iteration is to contribute more than I did this iteration. I felt my contributions were somewhat lacking during this iteration, As I was not able to contribute more to the proposal.

Section 3: Implementation Goals

My goal for the next iteration is to do another revision of the proposal based on Yongzhen's feedback during our client meeting today. We will also be preparing for our proposal presentation. A rehearsal session has already been scheduled for this weekend Sunday to practice our assigned part. Lastly, we need to finish our PowerPoint as part of our proposal presentation.
